NORTHBRIDGE FC

Stadium & Infrastructure Investment Report 2024/25

For the year ended 30 June 2025

Bristol, England

Stadium Redevelopment • Capital Investment • Long-Term Value

Community • Ambition • Excellence

Fictional knowledge-base document created for the Dynamic Agentic System project. All project values, schedules and forecasts are fictional.

1. Investment Executive Summary

Northbridge FC began a major three-year redevelopment of its historic approximately 50,000-seat stadium during 2024/25. The project is intended to preserve the ground's historic identity while improving premium seating, hospitality, commercial facilities and non-matchday revenue capacity.

The reporting year represents the early construction phase. The stadium remains operational, with work delivered in phases to minimize disruption to fixtures and supporters. Capital expenditure incurred during 2024/25 was £32.0 million, funded through a combination of Club cash resources and £25.0 million of external project financing.

The redevelopment is a long-term investment rather than a short-term capacity expansion. Northbridge intends to increase the economic value of its existing stadium by improving the supporter experience and creating additional commercial opportunities.

The project also creates short- and medium-term financial risks. Construction delays, cost overruns, financing costs and matchday disruption could affect the Club's financial position before the expected commercial benefits are fully realized.

2024/25 project highlights

Measure	2024/25 position
Project duration	3 years
Project stage	Early construction
Stadium capacity	Approximately 50,000
Capital expenditure incurred	£32.0m
External project financing drawn	£25.0m
Club cash contribution	£7.0m
Primary objective	Hospitality + commercial transformation
Operational status	Stadium remains open

2. Strategic Rationale

The redevelopment is based on the principle that Northbridge can generate greater long-term value from its historic stadium without abandoning the identity associated with the ground. The Club has therefore chosen a phased redevelopment rather than a complete replacement.

Investment objectives

- Improve premium seating and executive hospitality.
- Increase food, beverage and supporter experience capacity.
- Create stronger conference, events and non-matchday opportunities.
- Improve commercial and retail facilities.
- Modernize supporter-facing infrastructure while preserving historic character.
- Increase revenue per supporter rather than materially increasing stadium capacity.

What the project is not

The redevelopment is not designed as a major stadium-capacity expansion. Northbridge intends to retain an approximately 50,000-seat capacity and use improvements in hospitality, commercial facilities and supporter experience to generate additional economic value.

3. Redevelopment Scope

Workstream	Primary purpose	2024/25 status
Premium seating	Increase premium revenue capacity	Early works
Executive hospitality	Improve corporate and hospitality offer	Early works
Food & beverage	Improve matchday service and capacity	Early works
Conference & events	Increase non-matchday revenue capability	Planning / early works
Retail & commercial	Improve commercial footprint	Early works
Supporter facilities	Modernize supporter experience	Phased
Core historic structure	Preserve identity and character	Protected

The scope is deliberately balanced between revenue generation and supporter experience. Commercial improvements are expected to contribute to long-term income, while the preservation of the historic core is an explicit strategic requirement.

4. Three-Year Project Timeline

Phase	Indicative period	Primary activity
Phase 1 — Mobilization & early works	2024/25	Site preparation, initial construction and enabling works
Phase 2 — Major redevelopment	2025/26	Hospitality, premium and commercial facilities
Phase 3 — Completion & commissioning	2026/27	Final works, testing, fit-out and phased opening

The 2024/25 reporting year is the early construction stage. The stadium remains operational throughout the project, with construction sequencing designed to reduce disruption to fixtures and supporter access.

Milestone management

- Maintain operational stadium access during construction.
- Prioritize safety and supporter continuity.
- Track project expenditure against approved budgets.
- Monitor construction milestones and contractor performance.
- Release future project phases only after appropriate review.

5. Capital Expenditure

Capital expenditure category	2024/25
Premium & hospitality facilities	£11.0m
Structural and construction works	£9.0m
Food & beverage infrastructure	£4.0m
Retail & commercial areas	£3.0m
Supporter facilities	£2.5m
Technology, security & infrastructure	£1.5m
Project design, professional fees & contingency	£1.0m
Total stadium capital expenditure	£32.0m

The expenditure profile reflects the early construction stage. Capitalized project expenditure is recorded on the balance sheet rather than treated as an operating expense in the period in which the cash is spent, subject to applicable accounting treatment.

Funding

Funding source	2024/25
External project financing	£25.0m
Club cash contribution	£7.0m
Total capital expenditure funded	£32.0m

The financing approach reflects Northbridge's moderate-debt strategy. The Club is using external financing to spread the cost of a long-lived infrastructure investment while contributing a portion from internally available cash.

6. Project Financing & Debt

The stadium redevelopment is the principal driver of Northbridge's new long-term financing requirements. The Club considers the resulting debt position moderate and manageable, supported by a healthy but managed cash position and recurring operating income.

Financing measure	2024/25
Project financing drawn	£25.0m
Primary use	Stadium redevelopment
Debt profile	Moderate
Primary repayment source	Future operating cash flow
Liquidity position	Healthy but managed

Management's objective is to avoid using short-term borrowing to fund recurring operating losses. Stadium financing is instead linked to a long-term asset expected to support future matchday and commercial income.

Finance-cost sensitivity

Higher interest rates or changes in financing terms could increase annual finance costs. Northbridge therefore monitors debt service requirements alongside project progress, operating cash generation and expected future stadium income.

7. Expected Commercial & Matchday Impact

The redevelopment is intended to improve the economics of the stadium without requiring a material capacity increase. The primary expected benefits are higher revenue per supporter, stronger hospitality demand and additional non-matchday commercial activity.

Revenue opportunity	Expected mechanism
Premium seating	Higher value per seat
Executive hospitality	Expanded corporate packages and hospitality spend
Food & beverage	Improved service capacity and offer
Events	Additional conferences and private-event capacity
Retail	Improved supporter retail experience
Sponsor activation	More premium commercial activation space

The Club's existing matchday revenue was £40.0 million in 2024/25. Management expects the redevelopment to support future growth, but the financial benefits will emerge progressively as individual facilities are completed and commissioned.

8. Matchday & Operational Continuity

Keeping the stadium operational during redevelopment is a central project requirement. Northbridge is using phased construction to protect fixture delivery and minimize disruption to supporters, commercial partners and hospitality operations.

Operational controls

- Sequence works around the fixture calendar.
- Maintain safe supporter circulation and access.
- Use temporary facilities where necessary.
- Coordinate construction activity with matchday operations.
- Communicate material changes to supporters and commercial partners.

Temporary disruption may reduce certain matchday or hospitality revenues in individual periods. Management considers this a manageable short-term effect in the context of the project's long-term commercial objectives.

9. Project Risks

Key risk — cost overruns

Construction costs may exceed the approved budget because of inflation, design changes, contractor performance or unforeseen structural requirements. Management monitors committed costs, forecasts to completion and contingency usage.

Key risk — project delays

Delays could extend financing costs, postpone expected commercial benefits and increase operational disruption. Milestones are therefore reviewed throughout each construction phase.

Key risk — financing costs

Interest-rate movements and financing terms can increase the cost of the project. The Club monitors debt service requirements and liquidity alongside capital expenditure.

Secondary risk — matchday disruption

Phased works may temporarily affect hospitality, supporter access or commercial capacity. The project team seeks to minimize these effects through scheduling and temporary operating arrangements.

Secondary risk — benefits timing

The expected revenue uplift may arrive later than planned if facilities open in phases or demand develops more slowly than forecast.

10. Accounting & Financial Impact

The stadium redevelopment has a different financial effect from ordinary operating expenditure. Capital expenditure creates a long-term asset and associated financing requirements, while depreciation and finance costs affect future periods according to the applicable accounting treatment.

Financial effect	2024/25 treatment / position
Capital expenditure	£32.0m invested
Cash impact	£32.0m project outflow
External financing	£25.0m project funding
Club cash contribution	£7.0m
Operating profit impact	Not treated as full-period operating expense
Finance costs	Contribute to annual finance expense
Future depreciation	Expected as completed assets are brought into use

This distinction is important when analyzing Northbridge's £5.0 million net loss. The loss should not be interpreted as meaning that the entire £32.0 million stadium investment was expensed through the income statement during 2024/25.

Cash-flow relationship

Cash-flow item	2024/25
Operating cash generated	£21.0m
Stadium capital expenditure	£(32.0)m
Net transfer investment	£(9.0)m
Project financing inflow	£25.0m
Other investing/financing movements	£(3.0)m
Net movement in cash	£2.0m

The cash-flow bridge demonstrates why infrastructure investment can coexist with a modest accounting loss and a healthy liquidity position. Financing and operating cash generation help support the capital program while the Club continues to monitor liquidity.

11. Project Governance

The redevelopment is governed as a major strategic investment rather than a routine facilities project. Management's responsibilities include budget control, milestone oversight, operational continuity, safety, financing and delivery of the expected commercial outcomes.

Governance area	Management focus
Budget	Track committed cost and forecast completion cost
Schedule	Monitor milestone performance
Contractors	Review delivery and performance

Governance area	Management focus
Safety	Protect supporters, staff and construction personnel
Operations	Maintain stadium functionality
Commercial return	Measure hospitality and commercial capacity created
Financing	Monitor debt service and liquidity

12. Infrastructure Investment Outlook

Northbridge expects the remaining phases of the redevelopment to be the period in which the largest visible commercial improvements are delivered. Management's objective is to complete the project without compromising the Club's financial resilience or historic identity.

The investment case depends on converting improved facilities into recurring income. Management will therefore evaluate premium hospitality utilization, matchday spend, event activity, sponsor activation and commercial occupancy as the project progresses.

The Club remains committed to completing the three-year program while maintaining the stadium as the home of Northbridge throughout the redevelopment.

Long-term success measures

- Project delivered within an approved financial framework.
- Stadium remains operational throughout redevelopment.
- Hospitality and premium facilities achieve targeted utilization.
- Matchday revenue grows without material dependence on capacity expansion.
- Non-matchday commercial income increases.
- Debt remains manageable relative to recurring operating cash flow.

13. Stadium & Infrastructure Analyst Questions

- How long is the Northbridge stadium redevelopment expected to take?
- What stage was the project at during 2024/25?
- How much capital expenditure was incurred during the year?
- How was the £32m stadium investment funded?
- Why is the Club retaining approximately 50,000 seats?
- What are the main objectives of the redevelopment?
- How is the project expected to increase matchday revenue?
- How can the redevelopment increase commercial revenue outside matchdays?
- What are the major financial risks associated with the project?
- How does stadium financing affect Northbridge's debt position?
- Why is the £32m capital expenditure not treated as a £32m operating expense?
- How does the project relate to Northbridge's £5m net loss?
- What controls are used to keep the stadium operational during construction?

• What indicators will management use to judge whether the project is successful?

Cross-document consistency

This report is designed to complement the Northbridge FC Annual Financial Report 2024/25, Commercial Performance Report 2024/25 and Transfer & Wage Report 2024/25. Shared baseline facts include approximately 50,000 stadium capacity, a three-year redevelopment beginning in 2024/25, £32.0 million of 2024/25 capital expenditure, £25.0 million of external project financing, £40.0 million of 2024/25 matchday revenue, moderate debt and a £5.0 million net loss.

All project values, schedules, forecasts and events are fictional. This document is intended as a realistic RAG knowledge-base source and should be treated as part of the fictional Northbridge FC information environment.
