## **Matchday & Stadium Operations Report 2024/25**

For the year ended 30 June 2025

Bristol, England

Venue Operations • Matchday Delivery • Security • Supporters • Hospitality

### **Community • Ambition • Excellence**

Fictional internal knowledge-base document. Stadium, attendance, incident, staffing and operational records are fictional and are not a representation of any real club.

# 1. Matchday & Stadium Operations Executive Summary

Northbridge FC operates a major football venue in Bristol with approximately 50,000 seats. Stadium operations are responsible for turning the venue from a normal non-matchday facility into a controlled, safe and commercially productive matchday environment.

The Stadium & Facilities Director, Peter Caldwell, leads venue operations. On matchdays, the stadium team works through a coordinated command structure involving security, stewarding, ticketing, medical services, hospitality, supporter services, football operations, communications and emergency-response partners.

The 2024/25 operating year was also the first year of Northbridge's three-year stadium redevelopment. Matchday planning therefore had to preserve safe supporter access and normal football operations while construction activity continued in controlled areas.

## 2024/25 venue snapshot

| Measure                | Northbridge position                     |
|------------------------|------------------------------------------|
| Stadium capacity       | Approximately 50,000                     |
| Primary use            | Premier League football                  |
| Matchday revenue       | £40.0m                                   |
| Redevelopment          | Year 1 of 3                              |
| Stadium lead           | Peter Caldwell                           |
| Operations lead        | Michael Foster                           |
| Supporter lead         | Nadia Khan                               |
| Typical matchday model | Controlled operational command structure |

## 2. Stadium Operating Model

| Function             | Lead                            | Matchday responsibility            |
|----------------------|---------------------------------|------------------------------------|
| Stadium & Facilities | Peter Caldwell                  | Venue readiness and facilities     |
| Club Operations      | Michael Foster                  | Cross-functional coordination      |
| Security             | Head of Security                | Security planning and response     |
| Stewarding           | Matchday Operations Manager     | Crowd management and access        |
| Ticketing            | Head of Ticketing               | Ticketing systems and entry        |
| Supporter Services   | Nadia Khan                      | Supporter communication and issues |
| Hospitality          | Head of Hospitality             | Premium areas and guest services   |
| Medical              | Dr Sofia Marin                  | Medical response                   |
| Football Operations  | Daniel Ashford / football staff | Team operations and dressing rooms |
| Communications       | Tom Whitfield                   | Media and incident communications  |

The model separates venue ownership from the matchday command function. Peter Caldwell remains accountable for stadium infrastructure, while Michael Foster coordinates cross-functional operational execution.

### 3. Matchday Timeline

| Timing                | Operational activity                                                           |
|-----------------------|--------------------------------------------------------------------------------|
| T-24 to T-6 hours     | Venue inspection, cleaning, construction-zone checks, systems testing          |
| T-6 to T-3 hours      | Stewards/security deployed, ticketing systems checked, hospitality preparation |
| T-3 to T-1 hour       | Turnstiles and access points activated, supporter areas staffed                |
| T-90 to T-30 min      | Teams arrive, media operations active, crowd build-up monitored                |
| Kick-off              | Full matchday command structure active                                         |
| Half-time             | Crowd movement, hospitality and incident monitoring                            |
| Post-match 0-60 min   | Controlled egress and transport monitoring                                     |
| Post-match 60-180 min | Venue clear-down, incident reports and handover                                |

Exact timings vary by fixture, opponent, expected attendance, policing requirements and construction activity. The timeline is an operating template rather than a fixed minute-by-minute instruction.

### 4. Matchday Command Structure

Northbridge uses a centralized matchday control model. Operational information is fed into a control room, allowing responsible leads to coordinate incidents and make timely decisions.

| Role                     | Responsibility                                |
|--------------------------|-----------------------------------------------|
| Matchday Operations Lead | Overall operational coordination              |
| Stadium Director         | Venue/infrastructure authority                |
| Security Lead            | Security incidents and threat response        |
| Safety Officer           | Safety arrangements and crowd risk            |
| Police Liaison           | Coordination with police where applicable     |
| Medical Lead             | Medical incidents and clinical response       |
| Supporter Services Lead  | Supporter welfare and communication           |
| Football Operations Lead | Teams and football-side requirements          |
| Communications Lead      | External/internal communications where needed |

#### Incident flow

Incident detected → immediate safety assessment → control-room notification → responsible lead responds → escalation if required → decision/containment → supporter or staff communication → incident recorded → post-match review.

### 5. Stadium Access & Ticketing

Ticketing and access operations are designed to manage approximately 50,000 potential spectators while minimizing congestion and maintaining security controls.

| Area               | Operating control                         |
|--------------------|-------------------------------------------|
| Digital tickets    | Pre-match validation and system readiness |
| Turnstiles         | Controlled entry and scanning             |
| Accessible entry   | Dedicated accessible routes and support   |
| Hospitality access | Separate premium-area verification        |
| Staff credentials  | Role-based accreditation                  |
| Away supporters    | Segregated access and controlled routes   |
| Late arrivals      | Controlled entry after kick-off           |

Supporter Services monitors entry problems, ticketing disputes and accessibility requests. Material system failures are escalated to the matchday operations lead and technology team.

## 6. Security, Stewarding & Crowd Management

| Area               | Primary objective                    |
|--------------------|--------------------------------------|
| Perimeter security | Control unauthorized access          |
| Search procedures  | Manage prohibited-item risk          |
| Stewarding         | Guide, assist and monitor supporters |
| Segregation        | Maintain designated supporter areas  |
| Crowd movement     | Prevent dangerous congestion         |
| Emergency routes   | Keep evacuation/access routes clear  |
| Incident response  | Rapid escalation and coordination    |

Security arrangements are reviewed for each fixture based on opponent, attendance, supporter profile, intelligence and other risk factors. Operational planning also accounts for the stadium redevelopment so construction zones do not create uncontrolled interactions with matchday crowds.

# 7. Medical & Welfare Operations

Medical operations support players, staff, supporters and stadium personnel. Dr Sofia Marin leads first-team medical operations, while matchday medical arrangements include trained personnel and emergency-response procedures for spectators.

| Scenario                  | Initial response                                     |
|---------------------------|------------------------------------------------------|
| Minor supporter injury    | Steward/supporter services referral to medical point |
| Serious medical incident  | Immediate medical response and emergency escalation  |
| Player injury             | Football medical team response                       |
| Safeguarding concern      | Safeguarding lead escalation                         |
| Missing/vulnerable person | Control-room and supporter-services response         |

Medical, safeguarding and security teams coordinate where incidents overlap. Sensitive information is handled through the Club's legal and privacy controls.

# 8. Hospitality & Premium Matchday

Hospitality is a material component of the stadium's commercial model. Premium areas are operated as distinct service environments while remaining integrated with overall stadium security and safety.

| Area                  | Operational focus                      |
|-----------------------|----------------------------------------|
| Executive boxes       | Guest management and premium service   |
| Hospitality lounges   | Food, beverage and service standards   |
| Corporate guests      | Partner and sponsor obligations        |
| Matchday hospitality  | Arrival, service and departure         |
| Commercial activation | Sponsor rights and branded experiences |

Commercial and hospitality teams coordinate with Legal to ensure contractual rights and sponsor commitments are delivered without compromising safety or supporter operations.

# 9. Supporter Experience

Nadia Khan, Supporter & Community Director, coordinates supporter-facing operations with the stadium, ticketing, communications and community teams.

| Supporter touchpoint  | Operational focus                            |
|-----------------------|----------------------------------------------|
| Pre-match information | Travel, entry and fixture information        |
| Ticketing support     | Access problems and customer service         |
| Accessibility         | Reasonable support and accessible facilities |
| In-stadium experience | Wayfinding, facilities and service           |
| Complaints            | Record, resolve and escalate                 |
| Post-match feedback   | Identify recurring operational issues        |

The Club treats supporter experience as an operational KPI rather than simply a communications function.

## 10. Matchday Communications

| Situation                        | Communication owner                         |
|----------------------------------|---------------------------------------------|
| Routine matchday information     | Communications + Supporter Services         |
| Transport/access disruption      | Operations + Communications                 |
| Major operational incident       | COO + Communications                        |
| Safety incident                  | Operational command + appropriate authority |
| Stadium closure/major disruption | CEO/COO + Communications                    |
| Football team information        | Football communications                     |

Communications are coordinated so that supporter-facing information is timely, accurate and consistent with operational decisions.

## 11. Stadium Redevelopment & Matchday Interface

The redevelopment is a three-year project and represents a major operational constraint during 2024/25. The Club's approach is to separate construction activity from supporter routes wherever possible and to introduce additional controls where the two environments interact.

| Redevelopment issue  | Matchday response                       |
|----------------------|-----------------------------------------|
| Construction access  | Controlled routes and restricted access |
| Temporary barriers   | Pre-match safety inspection             |
| Noise/activity       | Work scheduling around fixtures         |
| Contractor presence  | Credentialing and segregation           |
| Emergency routes     | Pre-match verification                  |
| Construction changes | Operational sign-off before use         |

The stadium redevelopment has both operational and financial dimensions: the Financial Analyst documents the £32m capital program, while this Operations document focuses on how the project affects the delivery of football and supporter services.

## 12. Non-Matchday Stadium Operations

The stadium is also used for hospitality, events, commercial activity, community programs, maintenance and redevelopment works.

| Activity          | Operational requirement                 |
|-------------------|-----------------------------------------|
| Corporate events  | Venue setup, access and hospitality     |
| Community events  | Safeguarding and participant management |
| Concert/event use | Crowd, security and venue planning      |

| Activity         | Operational requirement                     |
|------------------|---------------------------------------------|
| Maintenance      | Planned access and asset management         |
| Construction     | Contractor control and project coordination |
| Commercial tours | Guest safety and access                     |

# 13. Matchday KPIs

| KPI                         | 2024/25 operating target               |
|-----------------------------|----------------------------------------|
| Turnstile/system readiness  | 100% before opening                    |
| Emergency-route readiness   | 100% pre-match inspection              |
| Material incident logging   | 100% recorded                          |
| Accessibility requests      | Tracked and resolved                   |
| Supporter complaints        | Logged and trend-reviewed              |
| Post-match debrief          | Completed after major fixtures         |
| Redevelopment safety checks | Completed before each affected fixture |

These are internal operational targets for the fictional Club and should not be interpreted as actual Northbridge performance statistics.

# 14. Matchday Operational Risk Register

| Risk                             | Level     | Control                                   |
|----------------------------------|-----------|-------------------------------------------|
| Crowd congestion                 | Key       | Capacity, stewarding and access planning  |
| Security incident                | Key       | Security plan and command structure       |
| Medical emergency                | Key       | Medical response and escalation           |
| Stadium construction interaction | Key       | Segregation and pre-match inspections     |
| Ticketing system outage          | Secondary | Technical support and contingency process |
| Transport disruption             | Secondary | Supporter communications                  |
| Reputational incident            | Key       | Executive escalation and communications   |
| Extreme weather                  | Secondary | Fixture-specific contingency planning     |

## 15. Operational Scenarios

### Scenario A — Ticketing system outage

Detection → ticketing lead confirms scope → technology team investigates → access points switch to contingency process → supporter services communicates instructions → COO assesses materiality → post-match incident review.

### Scenario B — Serious supporter medical incident

Incident detected → steward requests medical response → medical lead assumes clinical coordination → control room manages crowd/security interface → emergency services engaged if required → incident documented → safeguarding/legal/privacy review where applicable.

### Scenario C — Construction issue before a match

Issue identified → stadium director assesses safety → contractor isolated from public areas → safety officer reviews routes → matchday lead decides whether area can operate → executive escalation if material → fixture proceeds only with safe arrangements.

### Scenario D — Major crowd disruption

Steward/security escalation → control room assessment → police liaison where appropriate → crowd-management measures → supporter communication → executive escalation → incident report and post-match review.

## 16. Matchday Post-Event Review

After each match, operational leads review incidents, supporter feedback, staffing, access performance, medical events, hospitality delivery, stadium condition and any redevelopment issues.

| Review area   | Question                                            |
|---------------|-----------------------------------------------------|
| Safety        | Were there any incidents or near misses?            |
| Access        | Did entry and exit operate as planned?              |
| Supporters    | What recurring complaints or feedback emerged?      |
| Facilities    | Were there infrastructure failures?                 |
| Football      | Were team operational requirements met?             |
| Commercial    | Were hospitality and sponsor obligations delivered? |
| Redevelopment | Did construction affect operations?                 |

## 17. Operations Outlook

- Maintain safe matchday delivery throughout the stadium redevelopment.
- Improve data-driven analysis of supporter flow and incidents.
- Strengthen contingency planning for technology and access failures.
- Continue improving accessibility and supporter services.
- Integrate European competition requirements into venue planning.
- Use post-match reviews to identify recurring operational improvements.

## 18. General / Operations Analyst Questions

- Who is responsible for stadium operations at Northbridge?
- Who leads overall matchday operational coordination?
- How does the matchday command structure work?
- What happens from T-6 hours to kick-off on a typical matchday?
- How does Northbridge manage a 50,000-seat stadium?
- How are ticketing and stadium access controlled?
- How are security and stewarding coordinated?
- How are medical incidents handled?
- Who is responsible for supporter-facing operations?
- How does hospitality fit into stadium operations?
- How does the stadium redevelopment affect matchday operations?
- What happens when a serious operational incident occurs?
- What are the Club's key matchday operational risks?
- How are matchday incidents reviewed after the final whistle?
- What are Northbridge's main stadium operational priorities going forward?

### Cross-document consistency

This report connects directly to the Club Operations & Organizational Report, which establishes Peter Caldwell as Stadium & Facilities Director, Michael Foster as COO and Nadia Khan as Supporter & Community Director. It also connects to the Financial Analyst's Stadium & Infrastructure Investment Report, which records the £32m redevelopment program.

All stadium procedures, staffing structures, incidents and operational targets in this document are fictional. They are designed to create realistic retrieval relationships across the Northbridge knowledge base.
